

Hearing Aid Compatibility Chart

Cellcom offers HAC-compatible handsets and devices in all major price categories, including low-cost and feature ("C" level) (generally <\$100), moderate-cost and features ("B" level) (generally \$100-\$250), and high-end/feature-rich ("A" level) (generally >\$250). Costs generally correlate with the number of features, but, if through experience, Cellcom finds that a certain

handset contains features that work well with hearing aids, such as volume control, it will be labeled accordingly at the "high-end/feature-rich" or "A" level for functionality. Cellcom's sales staff is trained to assist all existing and prospective customers looking for a HAC-compliant device/handset. HAC-compatible handsets and devices vary in their inherent "levels of functionality," but typically at least one (1) HAC-compliant handset/device with features and services typical of its price category can be found that meets each customer's price range.

What does "M" mean?

"M" refers to using the phone with a hearing aid in the microphone setting. The higher the "M" rating the more likely it is you will be able to use the phone with your hearing aid on the microphone setting.

What does "T" mean?

"T" refers to using the hearing aid set on telecoil. The higher the "T" number the more likely you will be able to use the phone with your hearing aid on the telecoil setting. Reduced feedback and reduced background noise are additional benefits of using a hearing aid set on telecoil during phone use. Once mobile phones are rated for telecoil use, to determine the likelihood of successful cell phone use with your hearing aid add the "T" rating number of the cell phone to the "T" rating number of your hearing aid.

Manufacturer	Model	M-rating	T-rating	Functionality
Blackberry	Pearl 8130	M3	T3	A
