## Case Study

### Prevea Health Care on Wheels

Prevea is a healthcare provider located in Wisconsin serving patients in more than 38 health centers. Their mission is to offer health and wellness services that can't be found anywhere else. Prevea is committed to providing the best patient care and takes on the challenge of keeping its communities healthy. Prevea is an innovator and continues to develop new programs for wellness at home and in the workplace.

In the summer of 2015 Prevea launched a new initiative, delivering health care to employers where it was not available before through its mobile health vehicle. This allowed employers to offer different types of care to their employees at their work place as well as let employees to receive the care they needed when they might not otherwise be able to do so.

One of the challenges Prevea faced was not being able to access patient information, medical applications and resources while on the road. Prevea's mobile health vehicle could be travelling virtually anywhere medical care was required, but they needed a reliable, high-speed data connection that was easy for medical practitioners to use.

Cellcom was able to offer a simple solution to the problem. By using a cellular connection for broadband data connectivity, Prevea was able to get service and have access critical information anywhere they traveled. Having a high-speed data connection allowed them to access and manage patient information just as if they were in a health care center.

Using a single 4G LTE Cradlepoint device from Cellcom, Prevea is now able to offer on-site health care services where needed.
